I meant that we have hourly data that is not directly from CAMD but that we can format so its in the same format as the hourly data you would download from CAMD.

Hi Joe,

Thanks for your email, and thanks for joining us at training. We're considering what we can do with regards to the pre-processor. Maybe we can pick up this conversation with Robyn as well? What do you mean by "CAMD-style hourly data"?

Thanks

-Jeremy

Subject: AVERT Training Follow Up

Jeremy,

It was a pleasure to take the AVERT training last week and I learned a great deal about the tool.

I was writing though to follow up about the possibility of obtaining the preprocessor so that we can convert different CAMD style hourly data for use in the tool.
